

Heavy Duty Coin Counters / Sorters

Ease of Use

Semacon S-100 Series Coin Counters feature simple adjustments for setting the coin's diameter and thickness with presets for all US coins (other coin size presets available).

Electric/Electronic Operation

Our S-120 and S-140 models operate automatically for the ultimate in high speed counting & sorting. The electronic counting system provides an easy selection of variable bagging and packaging stop points.

Control Panel

Semacon's S-120 and S-140 model coin counters feature a pushbutton control panel which provides the functions used most often by the operator.

Coin Sorting

These models feature an offsort function to count and optionally bag or package the largest coin and separate the smaller coins into a second bag or tray. This feature can also be used to separate foreign coins or tokens from your coins.

High Speed

These counters are capable of processing coins at ultra-high speeds yet are quieter than many other coin counters.

Exceptional Durability

Both the S-120 and S-140 feature a solid metal chassis and heavy duty metal components designed to withstand the heavy use found in commercial counting applications.

International Models

The S-100 Series Coin Counters are available with control panels for Canadian and Mexican coins.

Portable Applications

Our S-120 model is portable in design for easy transport to multiple locations or for storing when not in use. When open the lid acts as an inspection tray for feeding coins into the hopper. When closed it protects the control panel and hopper so the unit can be transported using the built-in carrying handle.

Packaging/Wrapping

Optional packaging tubes are available for US/Canadian/Euro and many other foreign coins.

Model S-120
(Closed)

Model S-140

Model	Coin/Token Diameter	Coin/Token Thickness	Counting Speed (coins per min.)	Power Consumption	Dimensions	Weight
